

Q79943 SPECIFICATION TO BE FILED

ABSTRACT OF THE DISCLOSURE

A computer system and a method of setting an interface card therein that can be directly used without any separate setting of the interface card. In a computer system having a display device, an input device, a storage medium, a processor, an operating system, and a local bus capable of performing data transmission with the processor for a predetermined timing, the computer system includes at least one extension slot, provided in the computer system, for connecting with the local bus, and at least one interface card, detachably mounted in the extension slot, for loading built-in driver programs and environmental setting values to the operating system when the computer system is booted in a state that the interface card connects with the extension slot.
